

Dear Hiring Manager,

I am writing to express my interest in the position requiring expertise in building scalable data pipelines as described in your recent job posting. With a solid foundation in software development, complemented by my experience in Java and Python, I am confident in my ability to contribute effectively to your team.

In my current role as a Software Developer at Maximus, I have been actively involved in designing and maintaining Java applications with Spring Boot, as well as implementing microservice architectures. My previous experience as a Software Quality Engineer allowed me to develop automation frameworks and manage build pipelines using Jenkins, while analyzing business requirements for effective testing. Though I have not worked with Spark directly, my technical proficiency in Java and SQL, along with project work in Python, equips me with the necessary skills to bridge the gap in this area.

I am particularly excited about the opportunity to work with ETL technologies and contribute to data insights, as I have always been passionate about leveraging data to drive meaningful solutions. My hands-on experience with relational databases and capacity for analyzing large datasets further prepares me for this challenge.

I look forward to the possibility of discussing how my skills and experiences align with the goals of your team. Thank you for considering my application.

Warm regards,

Andrew Kassab
